

# INSURANCE AND FINANCIAL Q&A

## INSURANCE COVERAGE

Many of the procedures performed in conjunction with elective plastic surgery are what we consider “functional” or “medically necessary” and can improve a patient’s quality of life. You may be surprised to know that these procedures are often fully or partially covered by your insurance provider. Determination as to whether a procedure is medically necessary is made by your doctor.

Dealing with insurance companies can be confusing, time consuming and the language can seem almost foreign. If your doctor has determined that a procedure should be covered by insurance then we can be of service. Let us contact your provider to find out more specific information about your policy and individual coverage.

Please remember to bring your insurance card with you on the day of consultation and we will take care of the rest.

## FINANCING OPTIONS

If having surgery is a priority for you but the cost is prohibitive, there are solutions. We want to help provide you with options for financing and we have created relationships with several leading finance organizations in order to be of service. These groups can provide cash to pay for all or part of your procedure at Lasky Clinic Surgical Center. The monthly payments tend to be quite reasonable depending on the plastic surgery financing option you choose.

During the consultation, your patient coordinator will work with you to determine which financing company best meets your needs.
